Yang, C.-N. p177
Yang, T. p197
Yip, K.-W. p37
Yousef, S.Y. p363
Yum, T.-S. p133

Z

Zhou, H. p29

ADAPTIVE CONTROL

Closed-loop power control in CDMA systems p231

AMPLIFIERS

Stability analysis of Cartesian feedback linearisation for amplifiers with weak non-linearities p212

ANTENNA ARRAYS

Increasing the capacity of GSM cellular radio using adaptive antennas p304

ARRAY SIGNAL PROCESSING

Increasing the capacity of GSM cellular radio using adaptive antennas p304

CLOSED LOOP SYSTEMS

Closed-loop power control in CDMA systems p231

CODES AND DECODING

Array codes over rings and their trellis decoding p241
Design of efficient balanced codes with minimum distance 4 p177
Destructive collision-free protocol for distributed DS/CDMA wireless networks using code-sensing and chip-rate-division techniques p47
Evaluation of efficient trellis methods for soft decision decoding of Reed-Solomon codes p61
Generalised T-codes: extended construction algorithm for self-synchronising codes p122
Hybrid-ARQ system for HF channels based on codeword partitioning p73
New decoder for double-error-correcting binary BCH codes p129
Noncoherent detection with Viterbi decoding for GMSK signals p373
Performance and statistical analysis of two-layer MPEG coding algorithms for ATM networks p155
Performance of Reed-Solomon codes with dependent symbol errors p117
Preventive flow control method for packet video p98
Reduced-state trellis and its decoding for full-response CPM p68
Reliability-throughput: optimisation for adaptive forward error correction systems p341
Ring-TCM for fixed and fading channels: land-mobile satellite fading channels with QAM p281
Ring-TCM for M-PSK modulation: AWGN channels and DSP implementation p273
Simple method for generating distance spectrum and multiplicities of convolutional codes p247
Type-1 hybrid ARQ scheme with time diversity for binary digital FM cellular radio p29

COMMUNICATION SYSTEM THEORY

Analysis of bandwidth allocation schemes for transmission of VBR video traffic on a FODA satellite network p12
ATM switch capable of supporting unichannel and multichannel transmission p141
Bayesian decision feedback equaliser for overcoming co-channel interference p219
Cellular CDMA overlay systems p389
Closed-loop power control in CDMA systems p231
Design and performance evaluation of a distributed knockout switch with input and output buffers p149
Destructive collision-free protocol for distributed DS/CDMA wireless networks using code-sensing and chip-rate-division techniques p47
Discrete-time model for digital communications over a frequency-selective Rician fading WSSUS channel p37
Dynamic control of time slot assignment in multiaccess reservation protocols p167
Graph-theory-based protocol to provide centralised management of an extended LAN topology p182
Hybrid-ARQ system for HF channels based on codeword partitioning p73
Iterative interference cancellation for FFH/MFSK MA systems p380
Optimal blocked random access algorithm for CDMA-random access systems p396
Optimum time diversity for channels subject to pulse-burst interference p43
Orwell-D: medium access control for data, speech and two-layer video p189
Performance analysis of an output queueing ATM switch with heterogeneous traffic and multiple QoS p356
Performance analysis of nonpersistent idle-signal casting multiple access with collision-detection (ICMA/CD) protocol p162
Performance, interarrival, and correlation analysis of four-phase MMPP model in ATM-based B-ISDN p363
Performance of fault tolerant ATM switches p317
Queueing system with queue length dependent service times and its application to cell discarding scheme in ATM networks p5
Reliability-throughput: optimisation for adaptive forward error correction systems p341
Sojourn time analysis of prioritised DQDB (IEEE802.6) MAN with bursty traffic input p112
Source modelling, queueing analysis, and bandwidth allocation for VBR MPEG-2 video traffic in ATM networks p197
Suppression of multiple access interference in a DS-CDMA system using Wiener filtering and parallel cancellation p226
Use of second order Markov chains to model digital symbol synchroniser performance p250

COMPUTATIONAL COMPLEXITY

Array codes over rings and their trellis decoding p241
New reduced load heuristic for computing blocking in large multirate loss networks p206
Simple method for generating distance spectrum and multiplicities of convolutional codes p247

COMPUTER COMMUNICATIONS

Graph-theory-based protocol to provide centralised management of an extended LAN topology p182
Optical power distribution in wireless infrared LANs p93
Orwell-D: medium access control for data, speech and two-layer video p189
Sojourn time analysis of prioritised DQDB (IEEE802.6) MAN with bursty traffic input p112

DATA COMMUNICATION

Graph-theory-based protocol to provide centralised management of an extended LAN topology p182
Orwell-D: medium access control for data, speech and two-layer video p189
Sojourn time analysis of prioritised DQDB (IEEE802.6) MAN with bursty traffic input p112

DIGITAL ELECTRONICS

Design and performance evaluation of a distributed knockout switch with input and output buffers p149
Ring-TCM for M-PSK modulation: AWGN channels and DSP implementation p273
Use of second order Markov chains to model digital symbol synchroniser performance p250

ELECTROMAGNETIC THEORY

Adaptive phase diversity for MDPSK reception p267
Cellular CDMA overlay systems p389
Increasing the capacity of GSM cellular radio using adaptive antennas p304
Iterative interference cancellation for FFH/MFSK MA systems p380
Optimum time diversity for channels subject to pulse-burst interference p43

ELECTRIC VARIABLES CONTROL

Closed-loop power control in CDMA systems p231

ERRORS AND ERROR ANALYSIS

Estimated bit error probability of DS-SSMA/MDPSK with differential phase detector on satellite mobile channel p297
Reduced-state trellis and its decoding for full-response CPM p68

FEEDBACK

Noncoherent detection with Viterbi decoding for GMSK signals p373

INTERFERENCE SUPPRESSION

Adaptive phase diversity for MDPSK reception p267
Cellular CDMA overlay systems p389
Increasing the capacity of GSM cellular radio using adaptive antennas p304
Iterative interference cancellation for FFH/MFSK MA systems p380
Optimum time diversity for channels subject to pulse-burst interference p43

ISDN

Performance and statistical analysis of two-layer MPEG coding algorithms for ATM networks p155
Performance, interarrival, and correlation analysis of four-phase MMPP model in ATM-based B-ISDN p363
Preventive flow control method for packet video p98

MATHEMATICAL TECHNIQUES

Connection optimisation for two types of videoconference p133
Discrete-time analysis of the leaky bucket scheme with threshold-based token generation intervals p105
Fast adaptive polynomial I and Q predistorter with global optimisation p78
Graph-theory-based protocol to provide centralised management of an extended LAN topology p182
Performance and statistical analysis of two-layer MPEG coding algorithms for ATM networks p155
Reliability-throughput: optimisation for adaptive forward error correction systems p341
Sojourn time analysis of prioritised DQDB (IEEE802.6) MAN with bursty traffic input p112

MICROWAVE CIRCUITS

Stability analysis of Cartesian feedback linearisation for amplifiers with weak non-linearities p212

MODULATION

Adaptive differential detection for M-ary DPSK p21
Adaptive phase diversity for MDPSK reception p267
Digital transmission using multimode phase-continuous chirp signals p87
Estimated bit error probability of DS-SSMA/MDPSK with differential phase detector on satellite mobile channel p297
Fast adaptive polynomial I and Q predistorter with global optimisation p78
Iterative interference cancellation for FFH/MFSK MA systems p380
Optimum time diversity for channels subject to pulse-burst interference p43
Procedure for automatic recognition of analogue and digital modulations p259
Stability analysis of Cartesian feedback linearisation for amplifiers with weak non-linearities p212

MODULATORS AND DEMODULATORS

Use of second order Markov chains to model digital symbol synchroniser performance p250

MULTIMEDIA

Orwell-D: medium access control for data, speech and two-layer video p189

NUMERICAL ANALYSIS

Bayesian decision feedback equaliser for overcoming co-channel interference p219
Cellular CDMA overlay systems p389
Iterative interference cancellation for FFH/MFSK MA systems p380
New reduced load heuristic for computing blocking in large multirate loss networks p206
Performance, interarrival, and correlation analysis of four-phase MMPP model in ATM-based B-ISDN p363
Simple method for generating distance spectrum and multiplicities of convolutional codes p247

OPTICAL IMAGE PROCESSING

Performance analysis of optical receivers with space diversity reception p369
Performance and statistical analysis of two-layer MPEG coding algorithms for ATM networks p155
Preventive flow control method for packet video p98

OPTICAL LINKS AND EQUIPMENT

Lossless packet switching with small buffers p335
Optical power distribution in wireless infrared LANs p93
Performance analysis of optical receivers with space diversity reception p369

OPTIMAL CONTROL

Optimal blocked random access algorithm for CDMA-random access systems p396

OPTIMISATION

Connection optimisation for two types of videoconference p133
Fast adaptive polynomial I and Q predistorter with global optimisation p78
Reliability-throughput: optimisation for adaptive forward error correction systems p341
Synchronised call handoff performance model p56

PARAMETER ESTIMATION

Closed-loop power control in CDMA systems p231
Nonlinear dynamics in telecommunication systems: complex behaviour in nonlinear processing systems p347
Reliability-throughput: optimisation for adaptive forward error correction systems p341

PERFORMANCE EVALUATION

Sojourn time analysis of prioritised DQDB (IEEE802.6) MAN with bursty traffic input p112

PROBABILITY AND STATISTICS

Adaptive phase diversity for MDPSK reception p267
Analysis of mobile radio channel sounding measurements in inner city Dublin at 1.808 GHz p311
Bayesian decision feedback equaliser for overcoming co-channel interference p219
Call blocking performance for dynamic channel allocation technique in future mobile satellite systems p289
Cellular CDMA overlay systems p389
Design and performance evaluation of a distributed knockout switch with input and output buffers p149
Digital transmission using multimode phase-continuous chirp signals p87
Discrete-time analysis of the leaky bucket scheme with threshold-based token generation intervals p105
Dynamic control of time slot assignment in multiaccess reservation protocols p167
Iterative interference cancellation for FFH/MFSK MA systems p380
New reduced load heuristic for computing blocking in large multirate loss networks p206
Optimal blocked random access algorithm for CDMA-random access systems p396
Performance analysis of an output queueing ATM switch with heterogeneous traffic and multiple QoS p356
Performance analysis of nonpersistent idle-signal casting multiple access with collision-detection (ICMA/CD) protocol p162
Performance analysis of optical receivers with space diversity reception p369
Performance and statistical analysis of two-layer MPEG coding algorithms for ATM networks p155
Performance, interarrival, and correlation analysis of four-phase MMPP model in ATM-based B-ISDN p363
Procedure for automatic recognition of analogue and digital modulations p259
Queueing system with queue length dependent service times and its application to cell discarding scheme in ATM networks p5
Reduced-state trellis and its decoding for full-response CPM p68
Serving system with the correlated component of overflow traffic having changed serving intensity p1
Sojourn time analysis of prioritised DQDB (IEEE802.6) MAN with bursty traffic input p112
Source modelling, queueing analysis, and bandwidth allocation for VBR MPEG-2 video traffic in ATM networks p197
Statistical multiplexing of random processes in packet switching networks p325
Synchronised call handoff performance model p56
Use of second order Markov chains to model digital symbol synchroniser performance p250

RADIO SYSTEMS

Adaptive differential detection for M-ary DPSK p21
Adaptive phase diversity for MDPSK reception p267
Analysis of bandwidth allocation schemes for transmission of VBR video traffic on a FODA satellite network p12
Analysis of mobile radio channel sounding measurements in inner city Dublin at 1.808 GHz p311
Call blocking performance for dynamic channel allocation technique in future mobile satellite systems p289
Cellular CDMA overlay systems p389
Closed-loop power control in CDMA systems p231
Destructive collision-free protocol for distributed DS/CDMA wireless networks using code-sensing and chip-rate-division techniques p47
Digital transmission using multimode phase-continuous chirp signals p87
Discrete-time model for digital communications over a frequency-selective Rician fading WSSUS channel p37
Dynamic control of time slot assignment in multiaccess reservation protocols p167
Estimated bit error probability of DS-SSMA/MDPSK with differential phase detector on satellite mobile channel p297
Fast adaptive polynomial I and Q predistorter with global optimisation p78
Hybrid-ARQ system for HF channels based on codeword partitioning p73
Increasing the capacity of GSM cellular radio using adaptive antennas p304
Iterative interference cancellation for FFH/MFSK MA systems p380
Noncoherent detection with Viterbi decoding for GMSK signals p373
Optimum time diversity for channels subject to pulse-burst interference p43
Performance analysis of nonpersistent idle-signal casting multiple access with collision-detection (ICMA/CD) protocol p162
Ring-TCM for fixed and fading channels: land-mobile satellite fading channels with QAM p281
Synchronised call handoff performance model p56
Type-1 hybrid ARQ scheme with time diversity for binary digital FM cellular radio p29

RADIOWAVE PROPAGATION

Analysis of mobile radio channel sounding measurements in inner city Dublin at 1.808 GHz p311

SELF-ADJUSTING SYSTEMS

Closed-loop power control in CDMA systems p231

SIGNAL DETECTION

Estimated bit error probability of DS-SSMA/MDPSK with differential phase detector on satellite mobile channel p297
Noncoherent detection with Viterbi decoding for GMSK signals p373

SIGNAL PROCESSING

Adaptive differential detection for M-ary DPSK p21
Bayesian decision feedback equaliser for overcoming co-channel interference p219
Digital transmission using multimode phase-continuous chirp signals p87
Estimated bit error probability of DS-SSMA/MDPSK with differential phase detector on satellite mobile channel p297
Fast adaptive polynomial I and Q predistorter with global optimisation p78
Increasing the capacity of GSM cellular radio using adaptive antennas p304
Noncoherent detection with Viterbi decoding for GMSK signals p373
Nonlinear dynamics in telecommunication systems: complex behaviour in nonlinear processing systems p347
Procedure for automatic recognition of analogue and digital modulations p259
Suppression of multiple access interference in a DS-CDMA system using Wiener filtering and parallel cancellation p226

STABILITY

Nonlinear dynamics in telecommunication systems: complex behaviour in nonlinear processing systems p347

SWITCHING SYSTEMS

Design and performance evaluation of a distributed knockout switch with input and output buffers p149
Lossless packet switching with small buffers p335
Performance of fault tolerant ATM switches p317

SWITCHING THEORY

ATM switch capable of supporting unichannel and multichannel transmission p141
Design and performance evaluation of a distributed knockout switch with input and output buffers p149
Discrete-time analysis of the leaky bucket scheme with threshold-based token generation intervals p105
Lossless packet switching with small buffers p335
New reduced load heuristic for computing blocking in large multirate loss networks p206
Nonlinear dynamics in telecommunication systems: complex behaviour in nonlinear processing systems p347
Orwell-D: medium access control for data, speech and two-layer video p189
Performance analysis of an output queueing ATM switch with heterogeneous traffic and multiple QoS p356
Performance and statistical analysis of two-layer MPEG coding algorithms for ATM networks p155
Performance, interarrival, and correlation analysis of four-phase MMPP model in ATM-based B-ISDN p363
Performance of fault tolerant ATM switches p317
Preventive flow control method for packet video p98
Queueing system with queue length dependent service times and its application to cell discarding scheme in ATM networks p5
Serving system with the correlated component of overflow traffic having changed serving intensity p1
Sojourn time analysis of prioritised DQDB (IEEE802.6) MAN with bursty traffic input p112

Source modelling, queueing analysis, and bandwidth allocation for VBR MPEG-2 video traffic in ATM networks p197
Statistical multiplexing of random processes in packet switching networks p325

TELECOMMUNICATION

Call blocking performance for dynamic channel allocation technique in future mobiie satellite systems p289
Connection optimisation for two types of videoconference p133
Graph-theory-based protocol to provide centralised management of an extended LAN topology p182
Orwell-D: medium access control for data, speech and two-layer video p189
Performance and statistical analysis of two-layer MPEG coding algorithms for ATM networks p155
Ring-TCM for M-PSK modulation: AWGN channels and DSP implementation p273
Source modelling, queueing analysis, and bandwidth allocation for VBR MPEG-2 video traffic in ATM networks p197

TELEVISION

Preventive flow control method for packet video p98
